

Wendy Myers:

Hello. My name is Wendy Myers of MyersDetox.com. Thanks so much for listening today to the podcast. Today we have very compelling show that can completely change your life, change your thinking about vaccination. We're going to be talking to Judy Mikovits, who has done amazing ground-breaking research proving that vaccines, every single vaccine, contains retroviruses and how retroviruses are the cause of autoimmune disease, cancers, pain syndromes, brain swelling, and many diseases that are being diagnosed today for which doctors say have no cure and for which they have no treatment for. And that's absolutely not true. There's so many things you can do if you are one of the 25 million people affected today and infected with retroviruses. So we're going to talk all about retroviruses, how people are contracting these including the vaccines and other biological therapies, and what you can do, and where you can turn for help if you are afflicted and infected with a retrovirus.

If you want to learn more about how to improve your energy levels and detox your mitochondria, go to MitochondriaDetox.com. This is my ground-breaking discovery about toxic metals and how they cause fatigue in the body and the solution, which is a very simple three-step system to detox these metals that are interfering in mitochondria functioning and energy production in the cells. So if you go to MitochondriaDetox.com, you can learn more about my simple three-step system to detox your body of heavy metals like arsenic, aluminum, tin, thallium, and cesium, which are metals that are shown to reduce energy production in the body because of various reasons. And mitochondria detox is a very simple system to detox these metals. So check out MitochondriaDetox.com to learn more.

Our guest today is Judy Mikovits. She earned her BA in chemistry with a specialization in biology from the University of Virginia in 1980 and her PhD in biochemistry and molecular biology from the George Washington University in 1992. In her 35-year quest to understand and treat chronic diseases, she has co-authored seminal papers culminating at least a decade of research in each of four fields, immunology, natural products chemistry, epigenetics, and HIV/AIDS drug development.

In 2006, she became attracted to the plight of families with neuro-immune disease including ME and chronic fatigue syndrome and autism. Dr. Mikovits has been primarily responsible for demonstrating the relationship between environmentally acquired immune dysfunction, chronic inflammation, and these diseases. Dr. Mikovits has co-authored more than 50 peer-reviewed publications and book chapters in the book *Plague: One Scientist's Intrepid Search for the Truth about human retroviruses and chronic fatigue syndrome, autism, and other diseases*. Her pioneering work during her 20-year career at the National Cancer Institute includes a discovery of the moderation of DNA methylation machinery by human retroviral infection and the development of the concept of inflammatory cytokines and chemokines, signatures of infection and disease, which was first published in 1999 when she directed a laboratory of antiviral drug mechanisms in developing therapeutics and diagnostics for HIV/AIDS and age-associated malignancies. These are therapies that are still standard of care 25 years later and credited with saving millions of deaths from HIV/AIDS. You can learn more about her at [MARCINC.org](http://MARCINC.org), M-A-R-C-I-N-C dot org.

Judy, thank you so much for coming on the show.

Judy Mikovits: Oh, it's a pleasure to be here, Wendy. I appreciate it.

Wendy Myers: Why don't you tell the listeners a little bit about your story and your experience with vaccine research.

Judy Mikovits: Well, it's interesting because my story ... as you know, I'm a biochemist and molecular biologist with a PhD, and I spent 22 years at the National Cancer Institute looking at basically how viruses cause cancer, and the immune response to viruses contribute to cancers and any number of diseases including autism and myalgic encephalomyelitis. So I was part of the founding and creation of the first neuro-immune institute. It was called the Whittemore Peterson Institute in Reno, Nevada. And we did that in 2006, in December of 2006 essentially.

And what we were looking at was outbreaks of myalgic encephalomyelitis, which is a brain inflammation, a very bad disease of the brain akin to early-onset Alzheimer's or things to where you have a huge amount of pain, you're susceptible to chronic infections, you have more cancers, you can't remember anything. Literally it takes brilliant people down and removes them from their lives. And we suspected an infectious nature because there are outbreaks of the disease. In 2009, we published a paper showing retroviruses, viruses similar to HIV, were being isolated. We isolated them from patients with the disease also from their family members, also from people with cancer and autism. And so these retroviruses now, HIV/AIDS-like viruses, are causing even worse than HIV/AIDS. They're causing these diseases which destroy your immune system and your brain, and the worst part about it is you don't die. You simply suffer for decades with no brain, in horrible pain, can't sleep, can't think, can't work. And the government had basically been calling these people crazy, because you look fine. You look pretty like you and me sitting here. And everybody says, "Oh, she can't be sick."

She's beautiful. She's crazy." So moms and family members get called Munchausen's by proxy.

Wendy Myers: Yes.

Judy Mikovits: And basically the moms are forcing this because they're crazy, and their kids aren't sick. They're trying to get attention for the moms that are trying to help the kids or their family members. So it's a horrific 25 million Americans, and in fact, that's what we found. We isolated these viruses from 6% in all the controls. Yeah, that's 25 million Americans. And what's not realized is at the height of HIV/AIDS in 1991, it was only 1 million Americans. And think of the cost to this country. So 25 million Americans are carriers of these viruses, these AIDS-like viruses. And literally they explode at any given time, and the disease can be not present at all. You could just be a carrier. Or in the very susceptible, the very young and old, you can have devastating disease and even death from cancer.

Wendy Myers: And so you made a connection between retroviruses and these outbreaks in vaccination, and that these retroviruses are being found in vaccines. So can you speak about that, and you need to tell the story about your book Plague.

Judy Mikovits: Yeah, yeah, yeah. So we wrote the book Plague. Kent Heckenlively is a former attorney, and he had an injured daughter, a severely vaccine-injured daughter, in one of our family studies isolating these HIV/AIDS-like viruses. Well, my colleagues from HIV and the National Cancer Institute were all working with us at the Whittemore Peterson Institute, and they were finding a much bigger incidence of these viruses. And they're mouse viruses, so they're related to mice. They're mice endogenous retroviruses that have jumped into people, and that's how they cause disease. The HIV-like virus came from monkeys into people. And one of my colleagues from HIV wrote a paper in January of 2011 and said, "The most likely way that mouse viruses got into human is vaccines and biological therapies." All of our biological therapies essentially since the early '90s or mid '80s are biological therapies that now we understood from my work and from his commentary paper were most likely entering humans from not only vaccines but our biological cancer therapies, because they're all made in mice.

Wendy Myers: So give us an example of these biological therapies just for anyone that may have had these treatments.

Judy Mikovits: Well, some of the interferon therapy, some of the interleukins. The checkpoint inhibitors, so the drugs Opdivo and Keytruda that we see on TV every day. So the Time Magazine talked about this. It's called CAR, C-A-R, t-cell therapy. And this is the big cure for cancer, and it's made, literally how they get the genes into your cells, is with a mouse retrovirus. So you see, when my colleague, when we realized that these mouse retroviruses which we're making all of our therapies in mice and that we do all of our drug testing in mice. We do all of our testing in animal cell lines. We do our testing in human cell lines. So we grow our own cells in the laboratory, and we're in laboratories where there are

Judy Mikovits Audio (Completed 08/21/18)

mice and mouse cell lines. And in the summer of 2011, when my colleague wrote that opinion paper ... his name was Ben Berkhout ... and that paper is in the book. We discuss all of these things in the book. Essentially I said it was a suspense thriller. I called it a murder mystery, but God has a sense of humor and I survived.

And basically what we do is we open the book with my arrest and jailing. And so basically in order to discredit us, our paper in 2009 was published in one of the most highly regarded journals in the world, the Journal of Science. And basically just set the world on fire because doctors and patients everywhere started looking at not only myalgic encephalomyelitis but autism and the other cancers and things that are escalating in our world, the autoimmune diseases that are escalating in our world.

Wendy Myers: And pain syndrome.

Judy Mikovits: And pain syndromes. And like Ben Berkhout, Dr. Berkhout, they recognized that I was right. My husband's doctor in Ventura, California, even showed a chronic Lyme patient the paper and said, "This'll change everything. This'll change all of medicine." But little did we know that the problem was so big when everybody realized it wasn't just this disease called myalgic encephalomyelitis that nobody knew about and was only 1 million women primarily, but in fact, it was children with autism, it was cancer, it was lupus, it was you name it. Prostate cancer was where this family of viruses was first described in prostate cancer. And so for us, the only reason we were about to put it together is because that's what we had done our whole lives is work on how retroviruses and other viruses cause cancer, and we were actually making drugs, natural product therapeutics, to fight this with. And so we knew of the prostate cancer patient, and we started putting together that the families were all infected. And so the wife wouldn't obviously get prostate cancer, but she might get breast cancer and chronic fatigue syndrome.

So chronic fatigue syndrome is really a big closet disease. It's a shameful stigma name because in America, you can't be tired. And they do the same thing, blame the victim, and just say you're crazy, and oh, suck it up and get up and go work. And when these devastating viruses hit your brain, you're literally destroyed. So what our book does is walk through my arrest, my jailing. So it opens with my arrest. And so I get held in jail for five days without seeing a lawyer, with all of my constitutional-

Wendy Myers: So why were you arrested?

Judy Mikovits: On a fake charge without a warrant, without anything. I was called a fugitive from justice, but you can be a fugitive if there's no crime.

Wendy Myers: And so this is evidence that big pharma is trying ... and this happens to so many people, so many people doing research or vaccine research or cancer research that find something that makes big pharma look bad. And they do everything they can to discredit you, IRS audits, jailing,

threats. There's many, many, many people that I won't mention that I know of that just had their lives ruined or even are murdered.

Judy Mikovits: Right. Exactly. In fact, before I was arrested ... so I was fired from my job September 29th for no reason other than I had uncovered this, and I basically refused to say that we made a mistake, and our data was wrong. So they went to-

Wendy Myers: Were you asked to do that?

Judy Mikovits: Yes.

Wendy Myers: Yes.

Judy Mikovits: Yes. And I also uncovered that my supervisors were misappropriating federal funds, and they were also selling a diagnostic test that hadn't been properly validated for the family of viruses. And so I discovered this huge criminal ring surrounding the University of Nevada, Harry Reid, Harvey Whittemore. And basically, they were using this discovery. Harvey Whittemore had been embezzling money from his business partners, and they caught him. And they were threatening to kill him. And he had lied to the FBI about an election fraud with regard to Harry Reid, so Harry Reid wasn't actually legally elected. And they were paying people basically to donate to his campaign. So lots of other things going on there. And I had discovered this. In late August and early September, I discovered the scientific fraud and the misappropriation of federal funds by actually the first author on our paper, who was basically taking the money out of the research lab and putting it in the company, which is a big, big no-no, and not doing his job. And he was being paid for it. And so they were taking our data and using it.

And actually perpetrating fraud to continue, saying that the XMRV, the VP62, the original clone virus, was the virus we found, and it wasn't. It was a related family member. And this also made big pharma very mad, because they had the patent on the VP62. Abbott is the company with Robert Silverman in ... I forgot the name of the institute he worked in, but major ... Cleveland Clinic. So here's a major, major controller of our medicine and our vaccines and our pharmaceuticals, and they think they've got the zillion-dollar patent. And he said our virus that we isolated was his sequence, and it wasn't. So the fraud in the paper was Bob Silverman, and basically it's all about money.

So they basically put a gun to the head of Harvey and Annette Whittemore and said, "We got you." So she goes or you go. And their daughter was very, very sick with the virus, and the family is infected beyond the shadow of a doubt. And we got her well with anti-retroviral therapy. So when you use AIDS drugs, what we learned in HIV, and thanks to the advocacy group ACT UP, that by law, you can use a diagnostic code for other human retrovirus. Nobody can ask which in order to keep you from being stigmatized, and you can get your drugs subsidized by the government for \$25. So if you look and think about it, it's a disease to affect the economy of nations, and it's the brilliant

forward that Hillary ... I think it's Hillary Johnson ... wrote for our book. Sorry. My brain's not exactly firing.

Wendy Myers: So the cure for these retroviruses, anti-retroviral therapy, that's fantastic.

Judy Mikovits: Yeah.

Wendy Myers: So what is it-

Judy Mikovits: Well, as natural products. So you can use teas. You can use herbs. You can use 100-year old Bayer drug called suramin, S-U-R-A-M-I-N, and that drug is 100-year-old drug, and we know how to use it safely. And so an investigator, and I won't use his name, in San Diego, did a small clinical trial in autism with suramin used properly. We used to do a lot of research in the early '80s. It was one of our first HIV drugs. We pulled everything off the shelf that made sense that might work. And so suramin actually was curative for autism. And Bayer, the drug company, took it away from the kids. You cannot get it. It can heal these kids like Kent Heckenlively's daughter who hasn't spoke a word and is desperately ill. She looks like an AIDS patient, because that's what she is. And he can't get the drug. And so this just happened in the last year. So our book is revealing when you cure a disease, you know what caused it. And so suramin was actually the reason why we didn't use it in HIV is what did it work best on? Oh, the gammaretroviruses from mice. The retroviruses that we found from mice. And so HIV is a different family of viruses, so the suramin drug worked best on the family of viruses we isolated and discovered associated with all of these diseases.

And so now Bayer's back doing a lot of clinical trials, and I sure they're going to bring this back as something else, because it's 100 years old. So you can't patent it.

Wendy Myers: Yeah. So they're going to change one molecule, do a patent, and charge 10 grand a month for it.

Judy Mikovits: For everybody to get treated on diseases that they caused.

Wendy Myers: Yeah. So what is the truth of the current research findings on retroviral contamination and vaccines?

Judy Mikovits: The truth is essentially every vaccine is contaminated and/or they're making them out of backbones of retroviruses. And the sad truth is that the retroviruses stay in your genome for generations, and the murine leukemia, the gammaretroviruses from mice, can infect stem cells. So generations, grandma can have MECFS, and child can get it from grandma, inherit the sequence, and then the vaccines amplify it because there are many, many more viruses in there. Because the retroviruses, you don't have to have the particle, you just have the sequence. So anywhere there is animal cell line or cellular material, the sequence is only 8000 base pairs. It's called a provirus. And the provirus needs your cells in order to make a particle and be infectious and transmissible, and that's a really important part. But we're injuring

Judy Mikovits Audio (Completed 08/21/18)

literally thousands, tens of thousands, millions of base pairs of DNA in every single vaccine containing cow retroviruses, mouse retroviruses, pig retroviruses. And in fact, if you look at the CDC excipient list for the RotaTeq, the RotaTeq vaccine. They list two pig retroviruses in there, and they say, "Oh, but they don't do anything to humans." By definition, if you inject an animal retrovirus in a human, and it is expressed, it will hurt you.

Wendy Myers:

Yes. Yeah. And I wanted to do this podcast because of your very, very important research and findings. Because so many people are being harmed by vaccines. They think that they're solving one problem, but they're really creating another, creating a whole generation of people suffering from allergies, autoimmune disease, autism, dementia, cancer, pain syndromes. And there's a reason that this subset of health issues are rapidly on the rise in the United States today. And people are very frustrated, going to the doctors, not getting any sort of diagnosis. We don't know what's wrong with you. And so many people are suffering and looking for alternative means to aid their health.

So if someone suspects that they have something that you're talking about, a retrovirus, how do they go about getting diagnosed and tested?

Judy Mikovits:

Well, it's interesting, because we all have retroviruses that are immune system has crippled. They're called endogenous retroviruses, so they're not infectious and transmissible. And so meaning they're just silenced, and your immune system has kept them silent. And you have to keep them silent. So really it becomes a big conundrum. You don't want to test and say, "Do I have a retrovirus?" We know that you have lots of retroviruses, and there are pieces and parts and components of those retroviruses in every vaccine. And what we've learned now is you don't have to have an infectious retrovirus, just the components, just the pieces and parts, just the envelope gene, and the glyphosate in vaccines, or the mercury, or the aluminum that actually cripple the parts of the immune system that keep them silent. So it's literally a time bomb because we all have retroviruses, but mine are silent. Mine aren't turned on, because I'm 60 years old, and most 60-year-olds only got two vaccines. So it's not just a vaccine, it's the sheer numbers of these things. And it's not just the components and the retroviral elements in the vaccines, it's the mercury. Because every time you get one, it's like throwing gasoline on a fire. So the kids get sicker and sicker and sicker.

And so the ones that are the most dangerous carriers of the retroviruses, are of course MMR. And those are three RNA viruses. So varicella. It's the live virus or the attenuated virus vaccines, not the component vaccines, that are the most harmful. So when you've crippled a child by giving them the component vaccines for the first year of their life, you've crippled their immune system with the mercury, with aluminum, and a boatload of aluminum in the first year of life vaccines. And then you come in with MMR, and they have no defense.

Wendy Myers:

Yeah.

Judy Mikovits Audio (Completed 08/21/18)

Judy Mikovits: And it's known to contain. So my research showed ... the final nail in my coffin was a study that I did with a group. There's a disease called ITP, idiopathic thrombocytopenia. I explained idiopathic that the idiots don't understand the pathogenesis. And so that's why they call those diseases idiopathic. But we understand the pathogenesis. How it causes disease is what pathogenesis means.

So [James Bussell 00:29:19] in New York City had called me. One of his postdocs students had read the paper and said, "Gee, we have a lot of fatigue, and crippling fatigue, and pain in ITP." It's a platelet disease. It's a clotting of blood factor disease. And so we're starting to think, and it's often been associated with viruses. And they don't know what causes it. Well, kids, including my husband's eldest grandson who's now 18, was diagnosed with ITP after an MMR vaccination. And so MMR vaccination lists ITP as a side effect. And so I didn't know it at the time. I didn't know it at the time, because everybody just blamed that sibling, that mom for that child's Asperger's. Because he got ITP, and none of us knew it, and then he got Asperger's. Because it's, again, this stigma. People are ashamed. People don't talk. They hide these diseases in the closet the way we used to hide cancer. But a lot of people talk to me now because of the book, and that's why we do it.

So at any rate, ITP is listed as a possible side effect of MMR.

Wendy Myers: Yeah. My daughter was injured after her MMR vaccine. She regressed and just was not speaking, at almost three years old spoke two-word sentences. Complete evaporation and no progress in her language skills.

Judy Mikovits: Right. So this is what we learned. And so I did studies with James Bussell in his laboratory, and they sent me totally blinded samples. And about a third of the samples were positive for the envelopes of XMRB. So they had the components of the virus, and the patients were making immune response. And so we firmly linked the virus to some cases of ITP. And so the lots of the vaccines are contaminated. The heaviest contaminated are going to cause the disease because platelets don't live very long, so you can clear the infected cell. If you get lucky and you aren't really loaded with it, you'll just unfortunately get the autism. So our work actually confirmed and extended Andy Wakefield's work. And Andy Wakefield showed ... I went to talk to an autism meeting in January of 2010 right after our paper came out and met Andy at that time. And he said, "You know they're coming after you." And I'm like, "No, no. We got this, because we've got Frank Ruscetti, and we've got the National Cancer Institute, and we've got the stalwarts of everything. And of course, when the National Cancer Institute, when Tony Fauci, the head of the National Institute of Allergy Infectious Disease, when they all realized the scope of the problem, they basically said, "Science the Journal started this, and Science the Journal is going to end it."

And so when they couldn't retract our paper on scientific merit, they had agreed in 2011, we all agreed the sequence was wrong. So they said you couldn't validate your own work. Well, it wasn't that sequence. It was another virus. And in the validation studies, we were only allowed to look for that sequence, because that's what we said. So they twisted

the science around and said, "You didn't even validate your own work." Which of course we did many, many, many, many times over. And the cures speak to that with suramin and the other drugs. They speak to the fact that we were right and true, and it doesn't matter if it's a whole virus if you're injuring it directly. This is the problem, just the components, because vaccines bypass the skin, they bypass the infectious roots, the gut, they bypass everything. And you're taking that needle, and you're injuring that right into that child's brain or their immune system.

Wendy Myers: Right. Directly into the bloodstream with no filtration at all.

Judy Mikovits: And with the mercury poisoning and the aluminum poisoning and everything else that's going on, it's a perfect storm of a nightmare.

Wendy Myers: Yeah. And the vaccines today have such high levels of aluminum and forms of aluminum that are more toxic because the companies that make the vaccines need an adjuvant. They need something to trigger the immune system response, or like an irritant, and they use these forms of aluminum. A really toxic form is in the Gardasil vaccine. That's why it's causing so many injuries in people today, because that aluminum itself can cause death of a fetus in utero, it can cause [inaudible 00:32:34] aluminum attaches onto the nervous system and causes brain swelling, all kinds of nervous system issues, pain, things like that.

So on that note, let's talk a little bit about heavy metal contamination in vaccines, because that's my area of focus. So you'd mentioned that many children today are primed for developing these autoimmune diseases and health issues and expressing the retroviruses because they're so contaminated with heavy metals. So I believe a lot of children are being born today, getting the metals from their mother, the mercury fillings in the mother, that mercury is getting into the babies, and other toxins are in the mother getting into the baby through the placenta, sorry. And so let's talk a little bit about how the vaccines are also introducing heavy metals into children and adults today.

Judy Mikovits: Well, as you said, they're loaded with them. And no aluminum adjuvant ever has ever been tested in a clinical trial. And as you know, no safety studies have ever been done on the combination of any of the vaccines like MMR. When we make cancer drugs or even HIV/AIDS drugs, we have to test every single thing individually and then test them combined. But that takes decades and tens of millions of dollars. Well, these drug companies don't have any pipelines for cancer therapies because the cures are natural products and simple things. And so they're creating clients with their vaccines.

So yes, the vaccines are not only loaded with heavy metals but formaldehyde, polysorbate 80, which is a detergent intended. So they're loaded with garbage.

[Antoinette Gotti 00:35:28] published a paper where she did an electron micrograph study, and she showed even animal blood cells in there

Judy Mikovits Audio (Completed 08/21/18)

whole and all kinds. The metal off of the needle. She showed chromium. She showed all kinds of heavy metals in these things, they're so caustic. And they sit around forever, and we're just simply injuring them and creating a nightmare. And the schedule, because of the 1986 law taking away any kind of liability, all a company has to do is call a drug a vaccine and make a billion dollars. They don't have to do any safety testing, and they don't.

Wendy Myers: Yeah. Oh, yeah. They have no responsibility whatsoever. No liability.

Judy Mikovits: None. And most people don't know that. No liability. No doctors. You can't even say the doctor was wrong.

Wendy Myers: The doctors won't admit that they're wrong. I just had a friend of mine, their child had a vaccine reaction, a number of friends whether they care to admit it or not ... and the doctors will not say it's the vaccine. They're like, "Oh, the vaccines are completely safe." So people are deterred away from thinking that the actual cause of their child's health issue is vaccines when I think that's probably the primary reason children have allergies, and ADD, and the other types of health issues that we're seeing in the child populations today.

Judy Mikovits: Oh, absolutely. Every one of them. And I encourage your audience. That's why it's such a great thing what you do to go to AutismOne.org and look at the talks. They're all up there, and just all of the stuff. It talks about heavy metals at great length. Stephanie Seneff talks at great length about the glyphosate, which we now know as of last week, a jury awarded \$289 million to someone here in California who was spraying this stuff in full gear. So this is the big thing. They're in full gear. And yet they're spraying this stuff, and we're not.

Wendy Myers: So you're talking about the Roundup [inaudible 00:36:45] glyphosate, the weed killer sold by Mansanto. Spray it on all nonorganic food, all the golf courses, all of the parks where our children are playing. And it's in all the vaccines.

Judy Mikovits: And it's also sprayed as a drying agent.

Wendy Myers: Yes.

Judy Mikovits: Which most people don't realize. So a lot of the food that is even non-GMO and organic is being dried that way, and they don't realize it when it leaves the farm. And that includes our medical marijuana. There's only one place that's allowed to grow medical marijuana, and it's dried with glyphosate. So none of us can use it and do the testing. And the government knows it. So this is why they tried to destroy me. So between when I was fired and I was jailed, that was September 29th to November 18th, and I refused to give up, to say the data were wrong, because they weren't wrong. And we learned more and more and more about it, how it destroys the gut microbiome. So this glyphosate and the aluminum work together. The Roundup, the vaccines are contaminated with glyphosate. So Stephanie Seneff, Dr. Seneff and I, had been working the last few years to understand what the glyphosate does to

Judy Mikovits Audio (Completed 08/21/18)

the expression of the retroviruses. And again, it's aiding in the spread. So the volume, it's like this smart bomb that explodes once it hits your child. And it takes a long time to latency. But what we've done, meaning the time to when you get the injection to when you see the disease.

But the more exposure you have to the glyphosate, and the mercury is also in those so-called light bulbs that are the energy-efficient light bulb, they're just offing mercury. So there's a lot more mercury in our environment that we're exposed to. Same thing with aluminum. If you live within five miles of the coast, the aluminum's getting into the air, so we're exposed to a lot more things.

So FIJI Water is a great way to pull aluminum. The bottled water FIJI is a great way to pull aluminum out of your system every single day. And some of the waters like Perrier and the sulfur-containing waters, Pellegrino, are also really good for your health and your gut health and healing things. Fulvic and humic from the soil are restorative for the gut. So we can start healing. And I encourage, if you've never interviewed Zach Bush, who made the product RESTORE, Zach Bush MD out of the University of Virginia, just fascinating, fascinating.

Wendy Myers: Yes. Yeah, I keep meaning to have him on the podcast. It's the silica that's in the FIJI Water that is what caused the aluminum detoxification. My mitochondria detox kit actually has a much, much stronger form of silica, it's activated silica that helps to detox aluminum, arsenic, tin, thallium, and cesium very, very effectively because it binds to it and helps to get it out of tissues.

Judy Mikovits: And that's a really important point, because all of the metals you just mentioned are in the vaccines. All of them. That's in that Gotti paper, and I'll make sure that we post that for people who want to know later on.

Wendy Myers: Yeah. And so what is the hope that we might hold now, and what can be done to help people who are suffering?

Judy Mikovits: That's the best news. That's what I've moved on to do. So as I told you about the institute and the Whittemore's daughter being healed and getting back to her life, these natural products ... even something as simple as vitamin C. In high dose, vitamin C can correct the methylation defects that are being caused that are amplifying the retroviruses. All of our work for the last 40 years in HIV has enabled us to develop natural products. That's what we did as therapy.

So cannabis is a fabulous detox, heavy metal detox. And in fact, I was teaching doctors at AutismOne a few years ago when the lead in the water at Flint, Michigan, that story. I said, "Just throw the cannabis in the water. Just don't use it after that. Purify it."

Wendy Myers: Are you talking about CBD oil, or-

Judy Mikovits: Yeah.

Judy Mikovits Audio (Completed 08/21/18)

Wendy Myers: Okay.

Judy Mikovits: So I said just throw the plant. Throw the plant in the water, and the stock will pull. It's a huge great detoxifier, so it'd pull all the heavy metals out. Just don't use that plant unless you extract it and purify away the heavy metals. So the great hope we have is there are a lot of plants and very simple, cheap, effective ways to detox as you know, as you've talked about and spent your life detoxing your daughter. So once we know what the enemy is, we can even cure these cancers. And I testify around the world in courts and say, "Cannabis is curative for autism. It's not the cure. You need to do the other things. You need to detox. You need to find some of the sources. But as part of a simple way at \$20 or so, you can easily stay pain-free, stay well, and keep yourself and live a high quality of life."

So the hope, and that's why we put the story in the book about Magic Johnson, because my PhD thesis, the dogma at the time I was doing my research, was that all our therapies in HIV were made towards the t-cell. And it was let yourself get sicker and sicker and don't use these dangerous drugs, because they're too dangerous, and they'll kill you. Well, what my research showed we knew only one in 10,000 t-cells was infected. And I said something else is the orchestrator. So the orchestrator of the disease turned out to be the macrophage, the brain microglia, and what's the biggest damage from aluminum? The brain microglia, the macrophages all over your body. You have different microglia, different macrophage subsets that do different specialized things. Like fatty liver is our microglia in our liver, the Kupffer cells getting sick. And that's all the toxins, all the poisons, things like that.

So the good news is we can fix it. And we know exactly how to fix it because Magic Johnson is just fine, isn't he?

Wendy Myers: Yes, he is. Yeah. I know several people that they had HIV, but they have no symptoms whatsoever, perfectly healthy.

Judy Mikovits: So I go around the world saying, "You can have HIV and not have AIDS." So it's not about testing for these gammaretroviruses. It's just stop the vaccinations totally. In fact, that was what I thought would happen when our paper came out was everything would end, and they would stop this. You could've blown me over with a feather when I found out that the Journal of Science is fake news. And I think most of my colleagues are that way. It's so hard for doctors, nurses, anybody to really realize what they're doing with our research. No doctor wants to make their patient sick. And so doctors have to hold on to that vaccine. And no parent. Because the doctors are doing it. And that's why movies like Vaxxed, the podcasts like yours, the internet is really helping, and that's why we wrote the book because right in the book, it shows what lengths they went to to shut me up. I was a nothing-

Wendy Myers: You're not the only one. There is a systematic campaign to destroy, discredit, to silence people who were doing research like you're doing and censorship on the internet, on YouTube, on Facebook, on Google of people that are spreading fake news or talking out against vaccines.

Judy Mikovits Audio (Completed 08/21/18)

Because big pharma gives those three platforms a lot of advertising money. And these platforms don't want to publish information that is disfavorable to their main funder for advertisement revenue. And so that's why it's so difficult to find information that's anti-vaccine. And they spend millions, tens of millions of dollars in public relation campaigns to take this information off the internet.

I know I belong to a group that is anti-vaccine, and they'll be researchers in there. They publish a paper on the internet. Within 24 hours, it is removed because of this concerted effort to silence people who are trying to speak the truth out about vaccines that make billions of dollars to big pharma but that are hurting millions of people. And that's why I wanted to have you on the show today, to get the warning out to people to stop vaccinating themselves, stop vaccinating their children, because your health and your life is at stake if you do so.

Judy Mikovits:

Right. And for the laboratory workers. So there's a chapter in our book, as you know, chapter 7 talks about they had a big meeting four months before our paper was published because of course there's nothing confidential. The government figures out the journals are in bed, they're all propaganda. It's really not science, because the journals keep papers they don't want out. They reject them. They're supposedly peer review. It's not peer review. It's not. So probably still one of the best days of my life was the day, October 8th, 2009, the day that paper came out, because they had no idea. We knew the system so well, and we know the corruption surrounding HIV and what happened in HIV. So an entire continent died, between [Bob Gallock 00:47:30] and the corruption there. And what did they do? They reward him with an institute. It's our legal system. It's everything.

So when you read that book, and you say, "Wait a minute. They jailed her? They took away her constitutional rights forever? They virtually made her unemployed?" I had a perfect credit score, and they forced me to file bankruptcy, forced me to file bankruptcy or my husband would go back to jail. Yeah. Well, I would go back to jail, and my husband would die, which he almost died the first time. He's 80 years old now, and he almost had a heart attack trying to run around Ventura County and find out where the hell I was because he watched this spectacle of dragging me out of my home. So what the book does for most people, it's a bit science-y, and the reason why it's a bit science-y is because we have to show the government ... they've not said one word. Why in four years since the book's been out, and the paperback came out, and I encourage people to read the paperback also because I wrote an introduction of what I learned between '14 and '17. Because I learn more every day about the level of corruption.

I had no idea. In fact, a lawyer who had written a lot of the legislation for the vaccine compensation program called me up one day after seeing the book and said, "You have no idea what you stepped in, did you?" And I said, "No. Why don't you tell me?" And so to this day, I've never had a hearing. I don't have my constitutional rights. I can't work because it says on the internet that I filed bankruptcy and I stole \$15

million from my employers. Really? At least my brain's not petty theft, because that's what I stole, my brain.

Wendy Myers: Yeah, yeah. Yeah. And you used to testify in vaccine injury court in cases-

Judy Mikovits: I still do.

Wendy Myers: Oh, you still do? Where children are injured by vaccines and then are trying to in some way recoup their life and their financial devastation from trying to treat their child.

Judy Mikovits: Well, and that court is so corrupt. So what I'm doing right now is trying to blow it up. It is so corrupt. And in fact, a judge ... I say I still do, but a judge came out and said because of my checkered past, and listed the retraction from the Journal, and my arrest and jailing, my checkered past, says I couldn't be paid for this, and I have no credibility. So he refused to pay us for three years of work, which we will fight. Well, I'm not worried about getting paid. I don't work for money, as you know. But yes, we go in there. But the court is so corrupt that it literally, Jesus Christ Himself could testify and not win this. It's loaded with big pharma, the people for the Department of Justice and Health and Human Services who come in there and testify saying vaccines don't do anything, and they couldn't possibly have killed your kid, are all paid by big pharma.

Wendy Myers: Oh, yeah.

Judy Mikovits: And so people like us, they discredit. They try to make it so ... we were testifying recently on a case, we did it about a year ago, for cancer. So a 14-year-old gets a cancer associated with that AIDS patients get. And you know why. So they were saying the vaccines he got between a year old, the vaccines, all the virus, the varicella, all the ones that have a lot of DNA including retroviral DNA in them, and that's even the aborted fetal tissue. See, if you put the retrovirus from an endogenous virus from somebody else in you, that's still just as much as if it were a cow virus, a mouse virus, a pig virus. That's why I said essentially every vaccine has retrovirus in them. Plants have retroviruses. Yeasts have retroviruses. So you're putting all of this ... they're essential for regulating DNA, and we can't silence them all. So it's really interesting to think about all of this. And we opined in that case.

And the lawyer called me yesterday as I was driving here, and he said, "Can you find another doctor who can testify, because you and Dr. Ruscetti, and Frank Ruscetti, discovered the field of human-disease-causing retroviruses. And they said he doesn't know what he's talking about. So they've literally changed all of science and are teaching immunology to medical students that's like big pharma propaganda. It's not even true. So this is why your doctors ... they don't know what's in them. They don't know what happens. They don't know what the aluminum and the mercury, but lots of warriors like Chris Exley and [Chris Shaw 00:52:39] are talking about the aluminum, and they opining in some of these cases. We never win. We rarely win. But I don't write

Judy Mikovits Audio (Completed 08/21/18)

them for win and losses. I write them for history. It's written down. And this is going to be a time in our life when people look and say, "What were we thinking in medicine? What were we thinking?" It's like bloodletting now, how we're curing these things.

And it's simple, natural products. It's simple vitamin C. It's simple developing a healthy immune system. So I'm perfectly healthy, and I got two things, smallpox and ... what's the other one? Polio. And it wasn't polio in a needle full of formaldehyde, what is what people don't understand. It's not that vaccine. Since the '90s, they've been becoming more and more recombinant. None of them are tested. It's not just a piece, or a fragment, or a gene gun, or a sequence. And that's how they get away with it in a lot of these vaccine court cases is they say, "Oh, that's ridiculous." And so we very calmly explain what injecting animal DNA into a human does. And animal DNA is by definition a provirus, at least 15% of it.

It will be understood. It will be understood. And the great hope is that because of the internet, because now some of the sites that they're shutting down ... Mike Adams has come out with real.video, so real.video you can see some of these YouTube projects. We've got world mercury project with RFK Jr.

Wendy Myers: Yes, Robert Kennedy Jr.

Judy Mikovits: And Del Bigtree's work on the show HighWire. We're exposing. We're just exposing, exposing, exposing. And when people see the movie Vaxxed, all the doctors have to do is watch it, and they're like, "Okay." When the government admits the fraud, and yet they've done nothing. They've not subpoenaed him. They've not done whatever.

Wendy Myers: Say anything about [Robert Thompson 00:54:57]?

Judy Mikovits: Yeah.

Wendy Myers: Yeah. And it's sad, because you're saying that Mike Adams had to create an alternate video channel like YouTube because YouTube is censoring anything related to vaccinations. It's crazy. They have everything, and there's still information on there about vaccines, but they are systematically censoring people speaking out about the truth about vaccines. It's crazy to me.

Judy Mikovits: Right. And Dr. Suzanne Humphries. But it shows in my book they had death threats against Dr. Suzanne Humphries.

Wendy Myers: Yes.

Judy Mikovits: And the FBI said, "Oh, she's an anti-vaxxer. She made the threats against herself." And the FBI's full-on in it. And that's what we show in my book. The FBI's full-on in it. The FBI was part of the false arrest. Somebody has to create all this paperwork. It's your government, folks. And so I quickly wrote Mike and said, "Hey, Mike. She needs to walk into there. Never meet with the FBI without a lawyer." I've spent \$60,000 in the last

Judy Mikovits Audio (Completed 08/21/18)

five years meeting with the FBI, always with a lawyer. I've given them hard drives of proof of everything I say. And what have they done? Nothing. Just like William Thompson. He admitted the fraud. And so we now know ... Frank Ruscetti, what we're going to have in the next book that Kent writes, because we're writing another one now, because we learn more of the story every day ... when Frank Ruscetti, they forced him into retirement. And when he retired, he could take any of his data with him except, or any of his notebooks with him except anything having to do with XMRV, and that he was supposed to throw in a recyclable container and it would be burned like the data associating MMR with autism.

So when people see that ... he put it in the recycle container, I just want you to know, but it ended up on my porch. So I got it. We got all the data. We got all the samples. We're good. We will continue to expose.

Wendy Myers: So I want to talk a little bit about mandatory vaccinations. So big pharma is doing a concerted campaign to mandate vaccines worldwide and systematically state by state by state is falling where vaccines are mandatory, including California. And this is happening in Australia. It's happened in Italy. It's happening in other countries where vaccines are being mandated. And it's not for medical reasons. This is not for safety. This is not for immunity. It's only about money.

Judy Mikovits: It's only about money.

Wendy Myers: And also because when these children becoming vaccinated become ill, then big pharma also profits from all the testing and the drugs and the blah, blah, blah.

Judy Mikovits: And the dying early. We're dying early.

Wendy Myers: Mm-hmm (affirmative). Cancer and things like that.

Judy Mikovits: I'm here in Half Moon Bay, California, today seeing a 28-year-old with one of the worst breast cancers I've ever seen. I've only seen a few of them in the world. And she's heavily vaccinated. And the Gardasil vaccine. And a French oncologist just exposed that the Gardasil vaccine literally is causing cancer. And we know that. We've known it for a few years, and we're fighting it. So yes, the mandatory vaccines. It's unconstitutional. And people don't realize that Thomas Jefferson and our fore fathers, Hamilton, when we were forming this country, one of the reasons to get away from England was because England said, "You either belong to the Church of England or you don't get an education." Well, here we are in California, and you don't get a vaccination, and you don't get an education.

So what about constitutional rights? Well, mine were all removed. So we are systematically removing our constitutional rights. I work with Health Freedom Idaho, all the Health Freedom fighters here in California. In Ohio, we go anywhere and talk to anybody to encourage them to fight against these laws, not only mandatory vaccines but anything else.

Judy Mikovits Audio (Completed 08/21/18)

You can't do a clinical trial for cancer and get a stem-cell transplant without having to get vaccinated right after that.

Wendy Myers: It's insane. It's absolutely insane.

Judy Mikovits: Yep. We're causing the cancers with the vaccinations. And I had a friend, and he's dead now. He had a perfectly successful stem cell transplant, and The City of Hope where he was being treated said the clinical trial requires the vaccines. And I'm like, "Please, please, please, please don't go back." That's what people can do. Don't go. Don't go to the doctor. You can weigh your own child.

Wendy Myers: Yes.

Judy Mikovits: Don't go. Don't get bullied. We're getting together and teaching people. Dr. Ruscetti and I don't have a lot to do. We'll teach your children. That's what we're doing. We can do webinars. We can do education online. I have so many family members that say, "My daughter wants to go to USC, and she's unvaccinated. Well, what do I do?" I said, "Pick another university. Go somewhere else." "Oh, her heart's set on it." And it's like, "What can I say to you?"

Wendy Myers: Yeah. And I'm terrified, because I just moved. And I'm enrolling my daughter in public school for the first time. Because my daughter was vaccine injured, I spent \$100,000 two years in occupational therapy, speech therapy, a special school for autistic children to draw out her language. And she's normal now. And I intend to keep her that way. I do have a medical exemption, a doctor went through her whole history and signed a medical exemption, a waiver for vaccines, until she's 21 years of age. But I'm terrified that somehow it won't meet the school's requirements to avoid vaccines. So I'm just waiting to see what happens when I enroll her and go to the school. So it's a very nerve racking thing to have your child have a medical procedure that they had a severe reaction to but still be required to have that medical procedure. They would never do that if you're allergic to penicillin, force you to take penicillin.

Judy Mikovits: Correct, correct. And in every cancer, in every commercial for these cancer drugs ... which are also against the law, they're false advertising ... but when you look at these cancer drug commercials, they say, "Tell your doctor if you have a vaccine or you expect to get one." Why? Because they're medical procedures. Why do we do it in a grocery store? You're right. But we've got to change everyone's mindset. Immunity doesn't come in a needle. Immunity comes from a healthy immune system and keeping it healthy with natural products, plants, a good diet, healthy food, no glyphosate, no Roundup, no GMOs.

As Zach Bush said ... he did a show on HighWire about middle of June, and it was called Bullet Proof Your Health. And Bullet Proof Your Health, he said you don't need a doctor. You need to know your farmer.

Wendy Myers: Yeah.

Judy Mikovits Audio (Completed 08/21/18)

Judy Mikovits: You need to go back to healthy living. You need to know your farmer. And that's all you need to stay healthy. And one of the reasons I wrote about the chapter in our book about the lab workers, which I diverted from ... my brain goes from here to there and everywhere ... the doctors are all getting sick. And so the nurses are all getting sick. And the big oh-my-God was we can't afford to retrofit our labs bio safety level three like we do when we work with HIV so that we can work with mice. So they even redefined contagious. They redefined it so it's all aerosolized, and they redefined contagious in order to literally just keep the lab workers working and take away their risk. I'm infected, and I was heavily infected because of the lies of the government between 2009 and 2011 on our paper. And I was never infected before, because I worked my whole life. I worked my whole life in bio safety three and bio safety level four facilities there to work with these dangerous pathogenic agents. And so I got infected at the institute.

They can't afford the lawsuits. They can't afford the lawsuits. But you see me sitting here. I'm basically well. I can get sick.

Wendy Myers: Yeah, and that's because you had a lifelong foundation of health, healthy food, and no vaccinations. The vaccines like you said you had 50 years ago are not the same vaccines today. Very, very different.

Judy Mikovits: And I only had two. And I would never get one again. So the infected populations shouldn't be getting vaccines either. And do you know they're mandating the vaccination of autistic kids?

Wendy Myers: Yeah.

Judy Mikovits: Because vaccines don't cause autism. And they're causing ... and in fact, in one child, which we took to vaccine court, a doctor called me and said, "Judy, I have a problem. This high-functioning Asperger's had developed seizures immediately after a flu shot." So you see, we know that when you throw gasoline on a fire, you've got a problem. So no immune-compromised patient ... we didn't vaccinate AIDS patients. We are now. But we didn't until 2011. So we've just started. And what I always say to people is, "Hey, you didn't kill them the first time." It's the deplorables. Think about AIDS patients. Oh, the prostitutes, the IV drug users. They're the deplorables. They're the gays, the lesbian. It's a kind of ... I don't even know what to call it, but they convinced us all it was their bad behavior. And so the homeless in San Diego, hep A vaccine. Hepatitis A vaccine is one of the worst. They're loaded. So they're just, "Oh, we're just going to vax them all, because they're spreading hepatitis A around there. Just trying to get them off the streets." They're just killing them. They're killing them. I mean literally killing the deplorables in our society, including me I guess.

Wendy Myers: Well, Judy, I really commend your bravery in spending your life working on this type of research and standing up for what you believe in and standing up to big pharma in the face of them trying to hurt you and ruin your life. This is what deters a lot of people from doing cancer research and vaccine research, because they're literally putting their lives and their security at risk to do so.

Judy Mikovits Audio (Completed 08/21/18)

Judy Mikovits: Right. Exactly.

Wendy Myers: So thank you so much for what you're doing. And where can people find you? Say, if they have questions or concerns or need help with their health, where can they find you and what kind of work do you do with people?

Judy Mikovits: Well, we work on [MARCINC.org](http://MARCINC.org), M-A-R-C-I-N-C dot O-R-G. We have a new website, a healing website being put together as we speak. I'll get that link for you. And [PlagueTheBook.com](http://PlagueTheBook.com). So we put a lot of things up. My phone number is as public as any. So if you go to [MARCINC.org](http://MARCINC.org), which is just Mikovits and Ruscetti Consultants Incorporated. It's an escort. because I'm full-on bankrupt, I can't have a credit card or more than \$500. So the good Dr. Ruscetti takes care of me and this company and funds me to do whatever. So we work with people like I'm doing right now. I'm up with a family and that cancer patient, and the natural products. There's a lot of hope. We know exactly how to treat these, and we're just natural products. The doctors in Kaiser have given up on her, and the insurance companies. So you can find me at our websites. I answer the phone. I answer as many emails a day as I can answer. And I go give seminars for doctors. That's how you found me, and healthcare professionals through Julie Sands Donaldson and Dr. Ben Lynch.

So we try to post [AutismOne.org](http://AutismOne.org). We try to post every talk I give, and we try to teach other doctors, Dr. [Klinghardt 01:07:44], Dr. [Bigger 01:07:45], many, many doctors who are out there recognizing the work is right and true and just healing people. So they are easy ways to heal people. It takes a while in some of the more injured, but once we clean up the plague of corruption, we can easily handle the plague of disease by good old-fashioned health and immunity, and that's what we do.

Wendy Myers: Natural health and healing. Yes.

Judy Mikovits: Yeah.

Wendy Myers: Well, Judy, thank you so much for coming on the show and everyone. It was fantastic podcast, so I wanted to have Judy come on and talk about her story and talk about her amazing ground-breaking research. You can learn more at my website about how to detox your body at [MyersDetox.com](http://MyersDetox.com). Thank you so much for joining us today, and we will talk to you next week.

Judy Mikovits: Thanks so much, Wendy.
