Top Takeaways: #325 How Rife Machines Address Viruses and Infections with John White

1. Rife machines were invented by scientist Royal Rife, who developed a way to apply frequencies to microscopic organisms, which could disable and destroy pathogens.
2. Rife machines resonate cells to a point where they can’t handle the energy that’s being applied to them, breaking their cell membrane and destroying the cell.
3. Each cell has a specific resonate frequency, which can be targeted with the same frequency in order to destroy it.
4. One of the best ways to determine what frequencies to apply, and possibly what pathogens you have, is to perform a biofeedback, which can be done in several ways using John’s Spooky2 Rife machine.
5. The first uses contact pads that are stuck onto your body, which allows Spooky2 to scan your body by applying a range of different frequencies.
6. This same principle is used in the second type of biofeedback which uses clips that attach to your ears or fingers and meters your pulse rate.
7. The third way uses a sample digitizer that takes a sample of your tissue or saliva in between a microscope slide, and is pulsed with the frequencies like the other biofeedback scans.
8. Spooky Central and Spooky Plasma, are John’s Rife machines, which use plasma tubes or phanotron tubes, that produce a fixed frequency designers use to tune their electronics to create a high voltage called a carrier frequency.
9. The rife machine is a one off purchase that can treat conditions beyond just pathogens, like torn ligaments, with a consistently updated database of frequencies that can target new pathogens like the Coronavirus.
10. Once the bugs are killed, the machine also has healing and detoxing frequencies to help dispel them from the body.
11. John also provides free audio channels that you can listen to on your computer with speakers, which provide the frequencies that are found to kill pathogens. You can find these at frequencyheals.com.
12. To learn more about the most effective and affordable Rife treatment system available today, Spooky2, click here!
13. To learn more about the first scalar treatment device to provide three different methods of transmitting healing scalar waves, the Spooky2 Scalar, click here!
Hello everyone, my name is Wendy Myers. Welcome to the Myers Detox Podcast. You can check out my site at myersdetox.com. On my site and on this podcast, we talk about everything related to heavy metal detoxification. Part of that, before people detox, it's important for them to clear the terrain for reducing their viral load, their infection load, because these step up the detox pathways, these occupy your body, they drain your energy, they prevent good sleep. So it's important to have cutting edge strategies for being able to accomplish this, beyond just taking the supplements or medications.

So we talk about that today on the show. I interview my colleague, John Smith, on the show. We'll be talking about how Rife machines address viruses and infections, and how using frequencies from a Rife machine can very easily target and kill pathogens of all types in our body. We talk about what a Rife machine does, exactly, how it works, what types of health issues can a Rife machine address. We talk about how frequencies can be used to target infections, even the current viral outbreak, successfully. Hint, hint. And where to go to get free frequency healing without purchase of any equipment whatsoever.

I know you guys listening to this podcast are concerned about metal toxicity, your levels of metals in the body, and so I created a quiz called haveymetalsquiz.com. You can go there, take the two minute quiz, and get a free video series afterwards to answer frequently asked questions like where do I start to detox, what type of heavy metals tests should I do, what kind of supplements can I start to start a detox if I don't want to do testing or while I'm waiting for test results. So free video series, go check it out at heavymetalsquiz.com.

Our guest today, John White, is a Rife researcher and inventor. John White is a Rife researcher and inventor from New Zealand, now living in Nanjing, China. With a background in electrical engineering, physics, and computer sciences, he has been researching and developing solutions to serious diseases since 2008. John specializes in energy and scaler resonance healing, biofeedback, and PEMF therapy.

With an insatiable desire for truth and knowledge, John is collaborative with other research groups to discover answers to various health issues. At the beginning of John's career, the death of his grandparents influenced him greatly. He felt the helplessness of being unable to extend the lives of those that he loved. The subsequent death of Peter [Garbed 00:03:02], his teacher and mentor, brought focus to his determination to find a solution to illness.

He believes that sickness should not be a business, and that restoration of health should be our primary objective. His vision was to provide
people with all that they need to take control over their own health. You can learn more about John and what he does and the machines that he's invented at spooky2.com. John, thank you so much for coming on the show.

John White: Thank you for having me. It's wonderful to be here.

Wendy Myers: Yeah, so I wanted to talk about Rife, and what are called Rife machines. Tell us what that is exactly, and where did this kind of modality or protocol originate from?

John White: Well, there was a scientist who lived early in the 1900s called Royal Rife, and he was a brilliant man, he invented a lot of things, including a high powered microscope that could see resolutions, which are real small, and even today we struggle to match the same abilities with modern microscopes. He developed a way where he could apply frequencies to microscopic organisms, and he found, using his microscope, that his machines could disable and destroy these pathogens.

John White: He started a business, and the equipment, the machines which he made, he called Rife machines. That's where that term Rife comes from, from his name.

Wendy Myers: So what can the Rife machines do, and how do they work exactly?

John White: Well, they resonate cells to such a point that they can't handle the energy that's being applied to them, and it damages them. It may break the cell membrane, and they basically explode. Once a cell has been compromised and its contents have been spilled out, it's no longer viable. It can't continue doing what it was doing before. So by applying these frequencies, at this resonant frequency, the cell is drawing in more energy, more energy.

John White: The analogy which I often use is a child on a swing. If you push this child at the wrong point, there won't be much happened. But if you get the right point, which is just when the child gets back, and she's going, "Wee," forwards again, you give her a little nudge again. You know as well as I do that it doesn't take much force, you can basically tap with your lower finger, and the child could be swinging all day. It doesn't take much energy. That is the resonant energy of that child on a swing.

John White: But on a more somber note, with these pathogens that are doing harm to your body, they, in a similar way, have got a resonant frequency. If you can visualize a soap bubble, you give it a little nudge, and it starts wobbling. If you nudge it at exactly the same rate as the wobbles, the wobbles will get larger, and larger until the soap bubble bursts. This is very simplistically how applying these resonant frequencies can disable the pathogen cells.
John White: And not just that, Wendy, because, the reason that frequency depends on the size and other physical characteristics of the cell, you can target each cell individually. So by changing the frequency slightly, you can choose a totally different cell to resonate. So the way that it's got this targeting ability is very, very useful.

Wendy Myers: Yeah, and that's so important because so many people have infections, so many people have viruses and latent infections that are hiding from their immune system. They have Lyme disease, they have parasites, and candida, and especially when someone's ill, they have low energy, they have all these opportunistic infections in their body. It's something that we need a way, besides just taking physical symptoms, supplements or medications or whatnot, to be able to address these types of infections.

Wendy Myers: I love that Rife is just such a simple, elegant way to accomplish that in a totally non-toxic way.

John White: That's right. I think that most people, if not all people, have a viral burden which they regard as normal, that when you make up in the morning you might feel a bit groggy. Well, that groggy could be your body expelling the wastes from your deep pathogens that have been killed by your body's immune system during the night. Your body is fighting all the time.

John White: Quite a few people, when they do a detox vacation, people quite often have more energy. That's because their body can direct more of its energy to more productive things rather than on the battlefield. So it's very, very important, I think, to try and reduce the viral burden that's in your body.

Wendy Myers: So if someone suspects that they have a viral pathogen, or other type of infection, how do you go about maybe figuring out what infection that you need to address? Then what is kind of the assessment of before you use a Rife machine or similar type of machine?

John White: It's very hard to actually know what ails you when you're sick, or even if you're not sick. A lot of people have this viral burden that they carry all the time, and their body's fighting it, so you have low energy, but you think that's the norm. But it's not. One of the best ways to determine what frequencies to apply and possibly what pathogens you have is to perform a biofeedback. There's two ways that Spooky2 can do a biofeedback, or three now.

John White: There's the way where you just use contact pads, which you stick onto your body, and Spooky does a scan of your body by applying a range of different frequencies. The results will have some spikes, and where the spikes are, the frequency spikes, is where your body has provided the strongest response to your body.

John White: Another way is putting an ear clip on your ear, or on your fingertip. That's our Spooky Pulse, and it measures your pulse rate. When your body is
under stress, Wendy, it gives a bit of a glib, and it tends to change its rate. Well, again, a range of frequencies is applied to the body, and all this time, Spooky listens to your body, and finds the frequencies which had the greatest biological response by your body thinking, "Ooh, something's happening here. My tummy is starting to give a little of a rumble. Yup, it's all happening." It'll only happen at a short range of frequencies, and those are the frequencies that are of most interest.

**John White:** The third way is a really cool way, indeed, and it's our most recent development for biofeedback. It's where you don't even have to be connected onto any machine. You put something like a saliva sample between two slides, and you put them into a piece of our equipment, and Spooky will then apply the biofeedback to that sample. That's our sample digitizer.

**John White:** That's great because not only can it sample your saliva, or blood, or urine, or other things like those, but also for plants, for just about anything. Or for determining the molecular light frequencies for substances. You can find frequencies for an essential oil, and then apply those frequencies to your body, and so you'll be getting the biological effects of that essential oil, which is quite cool, really.

**John White:** Yeah, it's grown from there. People have thought, "Well, if I put my fingernail filings in the sample digitizer, do a biofeedback scan, through DNA entanglement, is it performing a scan on my whole body?" The digitizer can also apply frequencies, and so it can cycle between scan and run. In way, you can have like a dedicated physician in your home while you're out doing your daily activities, with this sample digitizer alternating between scanning, running the hits that were found in the scan, and then performing another scan to see what the results were from those frequencies, and then back again.

**John White:** It doesn't actually stop from there, because Spooky is always growing. We're always developing. We want Spooky to be the best, right? So we found a way, first of all, of automating the scan and run, which is very simple, then we advanced it to hunt and kill, where we do a scan, Spooky then will apply those frequencies, and in the subsequent scan, it scans either side of the frequencies that were previously applied. Because pathogens, when you try and hurt them with a frequencies, they will shift frequency to try and evade. Nothing likes being killed, and so the pathogens actually move, and might move from 23 million hertz to 23.1 million hertz. It'll move. So this other way of doing it actually keeps hunting, keeps chasing these pathogens that are found on the first scan, and it'll continue the chase until no hits are found.

**Wendy Myers:** I love it! It's like the sniper Rife.

**John White:** Well, that's what we should've called this piece, isn't it? Sniper Rife.
Wendy Myers: Exactly. I think that should be the new name. Let's talk about this. Why was Rife able to identify frequencies that we have trouble finding today? Because I know that there's a rash of people that have Lyme disease, that have Lyme-like infections, co-infections, and it hides from the immune system, antibiotics aren't working. I mean, we've got to have ... There's just better ways to do this. Doctors and functional medicine practitioners, Rife just hasn't caught on with that many people, and there's just such better ways to address these infections than these conventional treatments that are just trying to address things on a physical level. Like you have an infection, take an antibiotic, et cetera.

John White: Right. Well, before Royal Rife created the machine for killing the bugs, he needed a way to see them. So he developed this microscope that could see viruses right down to electron microscope resolutions. Very, very high resolutions. Now, electron microscopes, Wendy, you have to kill the object before it can be viewed. So once it's dead, you can't actually see the effects of frequencies on the virus. Well, he could actually see the virus while it's still living, or bacteria, anything microscopic. He could see it in the finest, finest details, and at quite good depths of resolution as well.

John White: Now, this is an advantage he had over us then, and he still has over us today because we still don't know, truly, how his microscopes worked. Now you might think, "Well, why not? He made them. Why don't we just pull them apart?" Because they were all taken, and they were destroyed, or compromised in some way by people that didn't like the work that he was doing. It is a travesty, but it's just the way it is.

John White: Your comment before about people aren't getting results now as they did back then, they actually are, Wendy. There's pockets of people that are getting very good results. But just because of the environment that they're working in, they're very weary that the same types of people will come around and do damage to them, to their families, and they think, "Well, the risk is just too great. We'll just carry on our own little way."

John White: There are people that have created microscopes which have got a similar resolution to the microscopes which Royal Rife created, that don't kill the object that they're viewing. But they're not made public. These microscopes are room-sized, they're made from parts which are sourced from different parts of the world, and all thrown together. They're very smart people that do this, but they haven't got the resources to do it on a grand scale as Royal Rife did have financial backers that provided samples of pathogens, lab animals, people to help him doing the lab work, financing. Everything's done on a shoestring budget now.

Wendy Myers: Yeah. I've met a lot of people that are working on the fringes, in isolation, or with just small groups of people that are doing just amazing, astounding things, just trying to advance science and advance our knowledge of how to heal the human body. So is there any more to the
story behind the R&D to help develop the Spooky2, which is similar to the Rife machine that you manufacture now?

**John White:** Right. Spooky Central and Spooky Plasma, those are our two machines that we call the Rife machine. They're the plasma machines. Royal Rife's machines were also plasma. We wanted our machines to be as close as possible to his machines. His machines used plasma tubes, they used what we call now a phanotron tube, which was a tube which was taken from an x-ray machine and filled with a gas so it doesn't produce x-rays. We produce our own phanotron tube. We had to develop a machine that didn't use a carrier frequency.

**John White:** Now, a carrier frequency is a fixed frequency that designers use to tune their electronics to create a high voltage. Once you've got this high voltage, then you can turn it on and off and do what you like to create harmonics from the carrier frequency. But Royal Rife didn't use a carrier frequency, not in his original machines, only in his subsequent machines when he employed a radio engineer that he went down that path, but he did it screaming and fighting.

**John White:** A carrier frequency wastes most of the energy, and in a frequency band that's not very useful. But as I said, the original Rife machines didn't use a carrier, so we were determined to also not use a carrier. After about six months of research and development, we came to appreciate just how difficult it was, and why there was no other plasma machine on the planet that also didn't use a carrier. It's frighteningly hard to do.

**John White:** So we continued that development, and in the end we did work out ways of performing the same tasks, the same function as Royal Rife machines have. His machines were valve controlled. Now, our machines are solid state. But regardless to the signal to the tube, it's as close to his signal as anyone else on the planet.

**John White:** Now, it's important to note that to be called a true Rife machine, you really need to have the approval of Royal Rife himself, and he is no longer with us.

**Wendy Myers:** Yeah.

**John White:** So we can't put Rife machine, put it on a label, stick it on the machine itself, but I think that if he was alive today, he would do it the way that we have done it. That's what we believe.

**John White:** If we used a carrier for the duration of a treatment session, the same frequency, at a very high power, often as high as 400 watts being applied to your body, now that's like a very low power microwave oven type of energy, at one fixed frequency, is not changing at all. So yeah, it's going to do damage to your cells over a period of time. I think it is important not to use a carrier. In fact, the carrier is like old news. Our machines can work with a carrier, with a fixed carrier. Of course it can, it's a very
advanced machine. It's probably several generations beyond anything else that's out there. So we can run at 3.1 megahertz fixed carrier, piece of cake. But we don't advise it because it just roasts the cells of your body at the same fixed frequency.

John White: You imagine listening to a sound on your headphones, the same frequency, just continuously. It'll do damage to your ears. You'd lose your ability to hear that particular note because of the damage that's done to the tiny hairs that are inside there beyond your eardrum. So it's important to vary this frequency.

John White: Because a carrier-based plasma unit wastes most of the energy in a part which isn't useful, those machines have to be very high power so that the frequencies which are being used have got a reasonable power. See, 400 watt machines, Wendy, will only apply something like 2 watts of power at a cancer cell frequency. 2 watts. What damage can 2 watts do?

John White: So our machine is a 30 watt machine, but it targets it. This is that sniper thought, thinking again. You only need one bullet, right?

Wendy Myers: Yeah.

John White: But it's got to be in the right direction, not a shotgun in every direction. See, our plasma machine is a sniper rifle, not a shotgun.

Wendy Myers: Yeah, I love that.

John White: Instead of shooting a deer, these carrier machines shoot the deer, the squirrels, the rabbits, and does damage to the trees and everywhere around it, with all these sharp pellets flying everywhere. These are the harmonics which these carrier frequencies produce.

John White: But our machine does it in a much better way, so the full 30 watts is being applied at the pathogen frequencies. The idea, Wendy, is that you do our biofeedback scan, you see where these viruses are hiding, you find where they're sensitive, and then you hurt those frequencies one, by one, by one. We have had people recover from very, very serious conditions that they've been told there's no way out. They're told to go home and just find a book to read and die. But we've sort of dragged them back from there, and removed those bugs from the body, and then the body has recovered on its own.

Wendy Myers: Yeah, because a lot of the illness is that the immune system can just become more, and more, and more overwhelmed, and unable to deal with this stuff. Then you become exhausted, and you're not sleeping because your immune system is fighting these pathogens at night, and you're releasing all this cortisol, and then you don't sleep, and it just becomes this downward spiral.

John White: Right.
Wendy Myers: My brother's wife was diagnosed with lung cancer, and I was looking into getting some kind of Rife or Rife-type machine to help her, and unfortunately, she passed within two months of her diagnosis.

John White: That's sad.

Wendy Myers: So sadly, but it was just too little, too late. But I was desperately looking for everything possible. But the Rife is amazing at targeting infections, and it's amazing for anyone that has cancer to really dramatically increase their chances of survival to get rid of all this other burden off of the immune system.

John White: One of the really good things about Rife machines in general, not just ours but any Rife machine, but in particular ours, it's a one life purchase. So you don't need to keep on paying each week, month for subscription tablets or anything. You can use the same machine for treating different ailments, even for conditions which you wouldn't normally associate with a Rife machine, like a torn ligament, so it's not really pathogen based. You can still use Rife machines for treating that. It's like a doctor at home.

John White: If you've got a good database, a good set of frequencies for different types of conditions, then you can treat any one of those using your machine. Where we think our machine is better than the rest is that it is always in development, not just in monthly updates of this or that. Our software is always updated free, by the way, the database is always growing. We have a Coronavirus DNA map, and the database frequencies released a day after the DNA had been sequenced. So we don't ... We're very, very proactive. We are very customer-focused because we're focused on our users. We think, "Well, okay, they've got our machines. Now let's look after them, look after these people." We've got a very active forum, Wendy. We've got, well I don't know how many now, but maybe 17,000 people on our forum. We've got our Facebook group where everyone's welcome to join, and that's massive, and growing by the day.

Wendy Myers: What's the name of your Facebook group?

John White: It's Spooky2 Rife for Life.

John White: Okay, if you don't mind, [inaudible 00:27:55].

Wendy Myers: Yeah, did I hear you correctly that you can combat Coronavirus with your machine?

John White: Yes.

Wendy Myers: Wow.
John White: Yes, and you don't even need expensive equipment. You can use the expensive plasma machines that we have, or you can even just use contact mode, which just means one generator, TENS pads, and that's it. So you can do it on a budget if you really want to.

Wendy Myers: Yeah.

John White: We're not really after the money, we're in it for the answers. Spooky started with me trying to save my grandparents, feeling helpless at the time, I guess with you and your family, similar situation. This feeling of helplessness is terrible. You think, "If only, if only." All people need is tools and education. Given those two, people can do wonders. So from the time when I lost my grandparents, I decided, "Right, I'm going to make a change, not just in my family, but in my global family." So I decided, "Well, until I'm pushing up daisies, I'm going to bring solutions forward. I'm not just going to do that, but I'm also going to make it so that people can afford them."

John White: There's been solutions, actually for a while, Wendy. But you know that you've got to have several zeroes after the numbers to afford it. It's only the people with big pockets that can buy these products. So it's not catering for the people that have already spent all their money on their doctors, on their drugs, and now they're right at wits end, they haven't got the answers. Well, we do this. We provide the answers. We also provide a fantastic service. We have audio channels which provide the frequencies that we have found for pathogens at frequencyheals.com. And we provide this for people that they can just ... without any hardware whatsoever, just listen to it on their computer. All they would need is their computer with their speaker. They don't need to buy anything from us.

John White: So we are very, very focused on providing solutions. If we can expand our hardware ... When our Spooky Pulse, our biofeedback device was first released, all it could do is do a biofeedback scan. Then you have to manually create the program, then you load the program into the settings, and then you run it. It was quite a few steps in the sequence, and it was quite complicated. But now, with programs such as this hunt and kill, you just basically hit the go button, and then just sit back and relax and let the unit do its job.

Wendy Myers: Let the AI do all the work.

John White: Well, that's what computers are for. Why are people complaining now that life's so complicated and busy, they haven't got time for family? They've got computers that are much more powerful than the computers used for putting man on the moon. And yet, people are finding life is much harder now than it was before computers. Well, we want to try and backtrack a little bit, and try and simplify things as much as possible. So when we do changes, it's generally for the better.
John White: Actually, while we're talking about bugs and things, I don't know whether I've got one to show you, but we developed a line of products, Wendy, which were very, very simple to use. Basically, you point and you pull a trigger. We formed a company called MiraMate, and you can find us at mirarmate.com. Anything that just has one button or two buttons to work, anything you can take out of a box and you can use without needing to read a telephone book sized manual, then you put into the Mirror Mate range of products.

John White: We created flesh. Now, if you've got skin cancer, you just point what looks like a gun to your skin, touch the skin, and pull a trigger. Flesh will kill the cancer cells on your skin. Now, I can say this rather than be a bit vague about our statements because we did tests, very expensive lab tests. We actually paid for an independent laboratory to do this, and it wiped out the cancer cells, and the cancer cells could not recover after one application of the Flesh.

John White: We've published this on the Mirror Mate range. We've got videos out on YouTube. So it's not rumors, it's not us being bold and trying to give sales. We've proven that our devices can actually kill cancer cells.

John White: Now, go a step further. You know age spots, Wendy, as we get older, we get age spots, kidneys, what they call liver spots, and all the rest of it, and people think, "Well, that's part of getting older." There's actually more to the story. Yes, you do get it when you're getting older, but those spots are viral reservoirs. When your immune system gets depleted, like when you get older, your body gets a little bit slower, then the pathogens which are harbored in those spots come out to play. If you remove those spots early, not through laser because that's just superficial, but if you kill the pathogens that are within those spots so those spots do truly disappear, then you reduce significantly your chances of later on in life getting health problems, major health problems later on.

John White: So we developed our Flesh, and as a result of that, I've run out of age spots. I call them beauty spots. I've run out of beauty spots, so I've had to Flesh other people to try and get them. I've got no spots, nothing at all, no moles.

Wendy Myers: Nothing left to demonstrate.

John White: Moles, as you know, moles, they're bacteria. So we zap moles, and moles disappear very fast. And fungus, if you've got like nail fungus is really hard to get rid of, virtually impossible. You ask someone who's got nail fungus, "Yeah, I've had it for years," they'll say. Flaky skin, and everything, nothing gets rid of it. Nothing topical, doesn't ... Well, Flesh destroys nail fungus very quickly.

John White: So frequencies, very high frequencies, which Flesh produces, or low frequencies, which is our plasma device, and our contact devices produce, they all do serious damage to pathogens, and they don't do
damage to your own body cells. So its kind of a no-brainer. If I had the equipment that we've now got back when I still had my grandparents, my grandparents could still be around even today.

Wendy Myers: Yeah, and it's just amazing what hear about technologies like this, that are so simple, non-invasive, readily available. And yet, you just don't hear about them very much. I mean, I did one Rife session probably 10 years ago at some office in Santa Monica, and it was interesting, but when you don't fully understand how it works or the potential for a Rife type machine to dramatically benefit your health, or maybe you're somewhat healthy you're just not looking for something like that, I think people just aren't getting this information that they need to know, or may need to know at some point in their life if they get a diagnosis or get infections.

John White: There's several good reasons behind that. The Rife community is always under attack, Wendy. Under attack by allopathic medicine. There's no money in it for them, and so they actively pursue, legislate, before putting stickers on equipment for certification, you need to put it through tests, and these tests happen to cost about $200,000. So of course, small companies cannot do this. The larger companies that can do so, they get it authorized. You need to get these certifications before you export, and so you get these pockets of Rife machines, but they're certainly not global.

John White: You're not allowed to say on air that your machine can heal. You're not allowed to say that it can kill viruses and bacteria or fungal diseases. And I just didn't say that. I'm just stating the things that you're not allowed to say. But I can state the results of laboratory tests that we've done, and this is why I could say that our machine killed outright these cancer cells. Again, I can say that because it's a point of fact.

John White: But in so many ways, we're restricted. When I was in New Zealand, I was developing my equipment very close to other researchers, cancer researchers based in the Auckland University. I had to do it secretly. In the end, I had to move. Now I'm in China, I'm away from the Western influence, the Western suppression of alternative approaches to healing, and I've got more freedom now.

John White: So this is how Spooky has grown so much over the years. We can freely develop, and even have the cooperation of the universities here to help us develop and refine our equipment. So our equipment is leading edge. And we're always fighting to make ourselves known. Quite recently, Google changed the algorithms, so if someone searches Rife now, for the first few pages, all they'll get are the negative reviews. They'll get all the reasons why Rife can't possibly work. And people will of course, get put off by this. Quackwatch and other people, they'll put out what they like.

John White: We're just hoping that people become self-educated, people start thinking for themselves and think, "Well, golly, if it works for a girl on a swing, something so basic, how can I scientist state that applying a force, a
vibrating force to something doesn't make it wobble?" Seriously guys, you know? If you apply a vibrating force to something, it wobbles okay, unless its something purely solid, but even then it wobbles, but just at a higher frequency, it'll wobble okay. If it's a smaller object, it'll wobble faster. But then again, you just apply faster frequencies.

**John White:** Out machine has got 40 megahertz, which is pretty fast, and in fact, they can go even higher. But we can target those cells directly. We can make them wobble, we can make them blow. But then the problem, of course, really is the detox. You've got to get rid of those toxins that are released by those bugs. This is why, in our treatment protocols, we also have healing frequencies, detoxification frequencies that allow your detox organs, including the skin, to function better, and get rid of all this garbage, this garbage you've been carrying around for years and thinking was normal. Helps your body get rid of all that so you find, "Gosh, I feel like a teenager again."

**John White:** It's actually a great feeling, when you wake up and you're actually on turbo [crosstalk 00:41:15]-

**Wendy Myers:** Yes, I have been feeling that. I love it! Yeah, I just find I'm really so thankful that I feel better than I've ever felt. Its meeting people like you, and discovering different things, and meeting different people as a result of doing this podcast. I can't wait to try it. I haven't tried it, but I cannot wait to try one of the Spooky2s, and we're going to talk after the show.

**John White:** It's great. In the arsenal against viruses and pathogens in general, you should have things like electrical devices, like Spooky2 or Neuromate. You should also have other things, simple things like activated charcoal tablets. So cheap. They're benign. You can hit the whole container in one go and it won't kill you. Things like this, which are so friendly, and things that just help your body raise its health level so that you can work at your full potential. You weren't born to be sick. You were born to be healthy, and your body's always trying to be healthy, but it's got all these obstacles around.

**John White:** And it gets worse all the time. This coronavirus that we were discussing just beforehand, Wendy, it's a new animal on the block. Now it's something else we've got to contend with, and we're told that maybe this virus is with us forever. Maybe it's going to be like measles, and we have to take a vaccine for it to prevent it from doing problems in the community. Now, it's just getting worse and worse. So more, now than ever, people need to have something in their medicine cabinet, so to speak, at home. And Spooky2 is a fantastic way of combating with these serious pathogens.

**Wendy Myers:** Fantastic. Yeah, I mean, you're right there in China, too. You're right there in the thick of it.
John White: Right in the thick of it, yeah. We see the ... We're hoping that it doesn't spread. This is something which is very sad, Wendy. If you're doing SO2 mapping of the state of China, where the incinerators are running, the hotspot, the spot where there's the greatest amount of SO2 being produced, remember that the factories all closed down now, the people are not working, there's no production in China, that's in Wuhan, they are quite possibly burning more bodies than what they're stating. We're talking about thousands of people. They're taken, and they're burnt straight away. It takes 40 minutes to do a burn. These cremation places are working non-stop, beyond capacity. And we can see satellite evidence of this, which can't be argued.

John White: We've got other states that in other times have greater concentrations of SO2 because of industry. All of Wuhan has been quarantined. There's no one coming in, no one going out, at all, not even a dog. So something's happening to create the SO2.

Wendy Myers: Yeah. Yeah, the sulfur dioxide that's released when bodies are burned, or plant matter.

John White: So that is something very, very, very, very serious. We really hope that it doesn't become global. If it does become global, we really hope that people have, before that time, equipped themselves with the necessities, food, water to last for a long period of time, and at home also to have health machines that will kill viruses in your home and your body. You need to have something like a Spooky2 device that can, if you come down with a virus, something to kill the virus inside your body. It's very, very serious.

John White: Now, we are in Nanjing. It's several thousand kilometers away from Wuhan. Nanjing is also being shut down. We are in quarantine. We can't come and go freely. We can't visit other neighboring cities. It's very, very serious stuff, Wendy. People need to prepare beforehand. I think if they had, at the very, very minimum, a Spooky2 Generator X and TENS pads, that's the absolute minimum, then they would be okay. Because with TENS pads and Generator X, they can do a biofeedback, find the exact frequencies to apply, maybe they've got the Wuhan virus, the coronavirus, or maybe they don't. They can do the scan, and then they can apply the frequencies. So it doesn't matter what is making them sick, they can get rid of it.

Wendy Myers: Yeah. So you're located in China. Are the Spooky2s shipped from China? Or is there fulfillment here in the United States or other countries?

John White: They're shipped from China. We don't have companies that are middle men, if you like, because we've always been focused customer direct, keeping prices down as low as possible. And the way to do that is to not do what other companies do. It's worked very well up to now, but now, of course, it's harder to get product out. But we are doing it. We've got our
stockpile of products. So we do recommend people do place your orders before it's too late.

**John White:** We have our skeleton staff. We're restricted to the number of staff we can have in our offices. The state have only allowed a certain proportion of the staff in to do the essential work, and so they've got permits to enter. Everyone else aren't allowed to enter the offices. So we can ship the product out, so people can place their orders without any issues, and we're doing our best to ship them as promptly as possible and with [inaudible 00:47:55] that we have.

**John White:** We've always been very, very customer-focused. We think every customer that buys our product, we consider them as part of our family, the Spooky family.

**Wendy Myers:** I want to be part of the Spooky family.

**John White:** Are you saying, Wendy, that you're doing this Spooky interview, but you don't have anything Spooky in your house?

**Wendy Myers:** I don't. I'm going to resolve that issue soon, though. I definitely want to get a Spooky machine, because I've been wanting to get one for a while. I've researched them a little bit here and there, but the ones that I found were $5,000. It's very cost prohibitive. So I'm really, really interested in learning more about your product.

**Wendy Myers:** So tell us, where do we go if we want to get a Spooky machine?

**John White:** Well, we've got a website which is dedicated for the sales of our products. It's [www.spooky2-mall.com](http://www.spooky2-mall.com).

**Wendy Myers:** Dash what?

**John White:** Spooky2-mall, it's M-A-L-L.com.

**Wendy Myers:** Mall, yes, got it. Fantastic. Okay, great.

**John White:** If you go there, you can launch from there to our various other groups, go to our forum and have a look around there, or join Facebook and see what's happening down there. Very, very, very active. I think we're the most active Facebook group there is. But that's only because more people are becoming aware of the importance of taking control of your own health. So we've got that.

**John White:** If you go and look at what products you have, we have various kits where you can buy a generator, and the TENS pads, and everything you need. It's just one kit that you buy, and there's descriptions of the kits, what the kit can do for you. We start from, I think, the starter's kit, and then it goes
all the way up to the big boys, and the big boys are the plasma machines, which are what we would term the Rife machine.

Wendy Myers: Yup, the sniper Rifes.

John White: The sniper Rife, yeah.

Wendy Myers: The virus hunters.

John White: We could have you on our marketing team, it's quite a term. Well, you know, we can't think of everything, right?

Wendy Myers: Well, John, thank you so much for coming on the show. That was such an interesting interview, and I love the work that you're doing. It's so important. I think people need to have everything in their arsenal possible, over and above supplements, to be able to kill pathogens, strengthen their immune system, and do it in a way that's beyond just food and supplements, and addressing things in a physical realm.

Wendy Myers: I think people are going to enjoy so much more health if they're addressing things bioenergetically, with frequencies, with energy medicine. That is the wave of the future. That is what is going to get the best results.

John White: One thing that we haven't touched on, I'll just touch on it briefly because I know that your audience is very aware of the importance of supplements, we have a Spooky scaler device. We can place a supplement on a coil and apply the effects of that supplement to everyone within the field, and that field can be your whole house. So you can get a very expensive supplement, healing supplement, something which is very good and natural, place it on the coil, and just leave it there, the coil doesn't consume the supplement, and the whole house is bathed in the healing frequencies of that supplement.

Wendy Myers: I love that.

John White: Which is quite obscure. Well, this is a device that is filling you. There's other devices which do the same function by other companies, but they happen to charge, or they were, 11,000 euros, then as soon as we released our product, they went down to 7,000 euros, which is still horribly expensive.

Wendy Myers: Yeah, yeah.

John White: Our one is a fraction of that price, and it looks better too, but it's by the buy. But it's something so simple, and we got reports of people that have had stage 4 cancers go into full remission just be using this product. We posted videos of them saying, "Wow," they were so moved by what it did for them that they decided to send us a video of them saying what it did and how good it was for them. We have this on our spooky2videos.com
site. We've got those in other places, as well. But yeah, spooky2videos is where people can find reviews of our products. It's all very well us saying how good we are, which of course we will, right? Because our view is entirely unbiased, but we have other people saying some of the things, so it saves us having to sort of pound our own chests.

**Wendy Myers:** Yeah. Well, fantastic, John. Thank you so much for coming on the show. So everyone, go to spooky2-mall, M-A-L-L, .com, to check those out. And everyone, thanks so much for tuning in to the Myers Detox Podcast, where we explore all types of topics related to heavy metal and chemical toxicity, alternative health, bioenergetics, energy medicine, because these things are things that can help people improve their body's health so that they can detox better.

**Wendy Myers:** So thanks for tuning in, and I will talk to you guys very, very soon.
